Meganite Receives Greenguard Certification for Indoor Air Quality

(Pomona, California) The GREENGUARD Environmental Institute (GEI) in Atlanta, Georgia awarded their two Product Certifications to Meganite, Inc. in September 2007, as a result of testing the acrylic sheets and sinks for low emission standards for interior building materials.

Indoor air quality is typically two to five times more polluted than outside air. The U.S. Environmental Protection Agency (EPA) ranks indoor air quality as one of the top five risks to human health, as it decreases worker productivity and contributes to health risks associated with asthma, cancer, reproductive issues, and developmental problems.

“With the GREENGUARD Certification, Meganite Solid Surfacing can be used in residential and commercial applications with the assurance that it can help protect indoor air,” says Carl Smith, CEO of GREENGUARD Environmental Institute. Smith also commented, “Further, the product’s certification through the GREENGUARD Children and School program can contribute to healthier environments in both school and healthcare settings. This versatility helps to broaden the selections of low-emitting products, and increases the visibility of GREENGUARD Certified products within the consumer market.”

Meganite acrylic solid surface is used to provide bacteria and stain resistant countertops in hospitals, healthcare facilities, food service and convenience stores, banks, schools, and residential kitchens.

About GREENGUARD Environmental Institute: The GEI is an industry-independent, non-profit organization that establishes acceptable indoor air standards. GEI’s mission is to enhance public health and quality of life through programs that improve indoor air.

About Meganite, Inc.: Meganite manufactures non-porous acrylic, solid surface products used in commercial and residential applications for countertops, work stations, lavatories, wall cladding, and window sills. Products are available through Regional Network Partners to local architectural millwork, contractor, and top shop companies.
